

WIND AND SOLAR POWER GENERATION

Siebc group of companies engineer, design and install full solar plants with the highest technical manufacturers of solar panels, inverters, power station, transformers and management systems.

We do full installations including civil and electrical works. Furthermore, we offer the maintenance and operation of the renewal energy plants.

Wind generation plant with power set up to produce hydrogen on site as backup storage system

LPG power supply plant with atmospheric lightning rod protection

Solar power plant to inject electricity on the grid

Low visual impact wind generation based on vertical blade systems
